

## All Weather Drum Covers

## Features Griffolyn T-85

This rugged material is formed from 5-plys of high density polyethylene copolymer and nylon yarn laminate. Reinforcement consists of 2 nonwoven grids of high strength cord which provides a uniform loading resistance of no less than 1380 pounds per yard in all directions. Nylon reinforcing is in diamond pattern with no fewer than 96 yarns per square foot. Yarn is suspended in a permanently flexible media to allow fiber slippage.

### Polyethylene Drum Covers

#### Heavy Duty Construction for Outdoor Use

Protect drums from contaminants and precipitation by covering them with heavy duty drum covers. Configured to provide full protection for drums while located over a secondary spill pallet. Each cover comes with tie-down grommets around the bottom perimeter. Protected clear pouch provides a location for contents identification. Constructed of chemical resistant polyethylene.
