

# Poly Dikes

Environmental Flight, 140 SPTG/CEV, recently oversaw the up-grade of the secondary containment dike system surrounding a 6,500-gallon poly tank containing de-icing fluid. The sand bag and poly liner system had decayed to the point where it was no longer functional. The new 30" high, heavy-duty poly dike system provided by Containment Corporation, offers a long term, safe, and attractive replacement.

Dim. 20' x 20' x 30" high Capacity 7,000 plus gallons

Containment's Crew also sealed the concrete cracks running across the floor on the system, and installed a drip pan under the tank valve.

The appearance of the area was significantly upgraded with the replacement of the old sandbag dike wall.
